EXTARO 300 from ZEISS
Visualize Beyond
Perfecting your art.

ZEISS EXTARO 300
Are you constantly looking for ways to elevate and differentiate your practice from mainstream dental providers? At ZEISS we know the challenges you face when you are aiming for the highest levels of performance and results – both functionally and aesthetically.

EXTARO® 300 from ZEISS provides breakthrough visualization modes that introduce new applications to microdentistry. From more efficient caries detection to a simpler tooth restoration workflow, ZEISS EXTARO 300 is poised to revolutionize and differentiate your practice.
Repair caries-infected fillings efficiently.

The Fluorescence Mode in ZEISS EXTARO 300 aids you in the detection of dental caries. As the first device combining caries detection technology\(^1\) with optical magnification, the Fluorescence Mode in ZEISS EXTARO 300 helps you to preserve healthy tooth substance.

Identification of carious tissue under microscope visualization saves precious time as there is no need to interrupt the workflow for visual support.

\(^1\) Jahrbuch der Endodontie 2017, Marktübersicht Mikroskope, OEMUS Verlag
The Mode Control allows activation of all visual modes on one interface.
See the Difference

**Identify the border between natural and artificial tooth material.**

The Fluorescence Mode in ZEISS EXTARO 300 also supports you in distinguishing natural hard tooth tissue from the most widely used dental composite resin. Using this clear visual differentiation will help you to target the affected area quickly, saving you valuable chair time.

See in True Light

**Analyze and restore teeth without distracting reflections.**
As the first device to combine polarized illumination with magnification, the NoGlare Mode in ZEISS EXTARO 300 allows you to precisely analyze the color shades of a tooth. The cross-polarization capability visualizes fine, but relevant details such as color nuances. It effectively suppresses obtrusive light reflections from the tooth surface.

**Prevent premature composite curing while working in a natural light environment.**
Similar to the existing Orange Color Mode, the TrueLight Mode in ZEISS EXTARO 300 does not cause premature polymerization of widely-used, contemporary light-curing composites under the microscope, giving you more time to finish complex modeling tasks. The new optimized color balance of the TrueLight Mode now allows you to identify relevant dental tissues in a natural, white-light setting.
The Power of Digital Interaction

Benefit from a digital workflow.
The integrated HD camera of ZEISS EXTARO 300 records wirelessly to the ZEISS Connect App, from where images and videos can be directly transferred to your local network.

Easily educate your patients and show them the value of your work.
ZEISS EXTARO 300 innovates patient interaction. With the ZEISS Connect App, you can show images of past and current patient conditions and highlight areas requiring treatment, enabling your patients to make informed decisions.
Experience Single-Handed Operation

**A dental microscope for an uninterrupted workflow.**
With only one finger you can reach the multifunctional Mode Control to activate all visualization and capture modes, as well as the light settings. From the same hand position, you can adjust the focus without leaving your preferred ergonomic working position.

**One finger suffices**
Activate all the Visualization Modes to augment your vision and introduce new applications to microdentistry.

Use the Capture Mode to record videos and images for documentation purposes and to educate your patients. This helps them make an informed decision and value your expertise.

Control all light settings — the brightness as well as SpotLight — for a focused treatment. Your patient and assistant will not be irritated by intensive light while using a long working distance.

Use the Varioskop® 230 to adjust the focal length to focus on the whole oral cavity and on minute details in the vertical axis.
Varioskop 230

operation

Variable working distance of 200 – 430 mm
