Foldable Tube f170/f260
An Ergonomic Breakthrough in Dentistry
The Foldable Tube f170/f260* combines brilliant apochromatic optics and a unique design for maximum visualization flexibility. It offers dentists a wide range of comfortable working positions, magnification potential and positioning ergonomics – even at extreme treatment approach angles.

**An Ergonomic Breakthrough**

The Foldable Tube f170/f260 introduces a high level of comfort:

**Rotate the tube** conveniently without moving the microscope head using the integrated 360° rotation function. No need for external rotating adapters while also reducing build height.

**Work ergonomically** by reducing or increasing the distance to the required treatment field thanks to the patented multi-link design.

The Foldable Tube f170/f260 allows an almost unlimited variety of working positions, providing optimal ergonomics and personalized positioning throughout each treatment. With its long reach, this highly flexible system easily accommodates different ergonomics of the operator and different positions of the patient.

**Greater Detail**

Instantly yield a 50% magnification gain for delicate and detailed procedures with the integrated PROMAG™ function.

Choose between optimum magnification and maximum field of view with a quick turn of the knob.

* f170: focal length of 170 mm like the tiltable tube
* f260: focal length of 260 mm provides additional 50% magnification (PROMAG)

**PROMAG for additional 50% detail magnification**

Endodontics picture courtesy of: Dr. Bijan Vahedi, Augsburg, Germany

1. 2. 3. Easily adjust angle, length and height as needed
4. Relaxed working position as eye level is higher than arm posture
