Surgeons who tested the BLUEMIXS 180 were impressed with how easy and safe the MICS IOL implantation is using this injector especially designed for the MICS procedure.

**BLUEMIXS 180 injector**
- 1.8 mm incision size
- Safety of preloaded IOLs
- Controlled and linear visco injection
- Astigmatism-neutral surgery with rapid visual recovery
- Covers the complete range of ZEISS preloaded MICS IOLs*

*For the specific IOLs available in your market, please contact your local sales representative.
"I found the preloaded ZEISS MICS IOLs with the BLUEMIXS 180 injector to be very satisfactory and easy to use. It's good for the patients as well as for the staff and by that I mean both the scrub nurses and the surgeons. With this system, there isn't a loading error because it comes preloaded. Also, your risk of contaminating the lens is much lower."

Dr. Paul Mullaney, Sligo, Ireland, Consultant Ophthalmic Surgeon, Sligo General Hospital

"We follow innovations in the ophthalmological laboratories very closely and we can truly say the BLUEMIXS 180 injector has now become a very important tool in MICS, allowing us to operate with added precision."

Dr. Colin Vive, MBBS FRCOphth, Hull and East Yorkshire Eye Hospital

"The ZEISS MICS IOLs, together with the innovative single-use BLUEMIXS 180 injector, provide the surgeon with the first preloaded MICS IOL solution. The BLUEMIXS 180 performs well in the hands of surgeons of all grades, delivering the lens into the bag consistently and eventfully."

Dr. Pierre Levy, MD, Montpellier, France

"I was pleased to find that no manipulation of the IOL is necessary and that our staff quickly adapted to the new injector. The lens emerges reliably through a smaller wound than I was using previously."

Dr. Andrew Ramsay, BSc (Hons), MBBS, FRCOphth, MD, UK, Consultant Ophthalmic Surgeon, West Suffolk Hospital

"I am very pleased with the performance of the BLUEMIXS 180 injector. In combination with a true MICS compatible preloaded IOL, BLUEMIXS 180 offers an excellent combination of features, chief amongst which are intracocular stability and ease of use."

Dr. Zachariah R. Koshy, MBBS, FRCS, MRCO, DnB, Ayr, UK, Consultant Ophthalmologist, Ayr Hospital

"Easy and safe implantation. The BLUEMIXS® 180 injector is the perfect and easy start into micro incision cataract surgery."

Dr. Pierre Boucheut, MD, Bordeaux, France, Thiers Ophthalmic Clinic

"An IOL used with the preloaded BLUEMIXS 180 system never needs to be touched, manipulated or adjusted when preparing the system for implantation. Thus, the possibility for handling errors is effectively minimized as well as the risk for IOL damage or unintended inverse placing of the implant during injection."

Dr. Björn Johansson, MD, PhD, Linköping, Sweden, Department of Ophthalmology, Linköping University Hospital

"There are very few suppliers offering a lens that can be injected into the bag or wound assisted through small incision sizes with a single use injector and that has influenced my decision to use the preloaded MICS CT ASPHInA IOL with BLUEMIXS 180."

Dr. Anil Pitalia, MBA, FRCS, MRCOphth, MBChB, BScHons, Manchester, UK, Consultant Eye Surgeon, SpaMedica

"This is the only all-in-one integrated solution for MICS. You do not have to enlarge the incision with the ZEISS BLUEMIXS 180. Whereas other manufacturers took one step forward and one step back, Carl Zeiss Meditec has gone two steps forward with this injector for use with preloaded MICS IOLs."

Dr. Anil Pitalia, MBA, FRCS, MRCOphth, MBChB, BScHons, Manchester, UK, Consultant Eye Surgeon, SpaMedica

"BLUEMIXS 180 permits safer micro incision surgery by combining the advantages of a reliable and easy-to-use injector with the quality of CT ASPHInA implants, while freeing the surgeon from the necessary manual intervention during the implantation."

Dr. Pierre Levy, MD, Montpellier, France

"BLUEMIXS 180 is the only all-in-one integrated solution for MICS."

Dr. Colin Vive, MBBS FRCOphth, Hull and East Yorkshire Eye Hospital

"I find the preloaded ZEISS IOLs with the BLUEMIXS 180 injector to be very satisfactory and easy to use. It’s good for the patients as well as for the staff and by that I mean both the scrub nurses and the surgeons. With this system, there isn’t a loading error because it comes preloaded. Also, your risk of contaminating the lens is much lower."

Dr. Paul Mullaney, Sligo, Ireland, Consultant Ophthalmic Surgeon, Sligo General Hospital

"The ZEISS MICS IOLs, together with the innovative single-use BLUEMIXS 180 injector, provide the surgeon with the first preloaded MICS IOL solution. The BLUEMIXS 180 performs well in the hands of surgeons of all grades, delivering the lens into the bag consistently and eventfully."

Dr. Colin Vive, MBBS FRCOphth, Hull and East Yorkshire Eye Hospital

"I find the preloaded ZEISS IOLs very easy to use with the new BLUEMIXS 180 injector system. The other advantage is that the way the lens comes out of the cartridge is more consistent with the preloaded. The lens is very easy to manipulate within the eye and in most cases I don’t need to rotate the lens into the bag after insertion. With respect to the toric lenses, the fact that the lens can be rotated bi-directionally (unlike c-haptic lenses) is a big advantage, avoiding the ‘lap of honour’ that is sometimes necessary if the lens rotates a bit too far in the case of c-haptic lenses."

Dr. Gareth Higgins, MB BMedSc, FRCSEd(Ophth), MRCOphth, MD, Waterford, Ireland, Consultant Ophthalmic Surgeon, Whitfield Clinic

"This is the only all-in-one integrated solution for MICS. You do not have to enlarge the incision with the ZEISS BLUEMIXS 180. Whereas other manufacturers took one step forward and one step back, Carl Zeiss Meditec has gone two steps forward with this injector for use with preloaded MICS IOLs."
